

OK 74.79

OK 74.79 is a high recovery, LMA electrode suitable for welding high tensile steels for structures. Very suitable for enclosed joint welding of rail and for cladding on rail when a hardness of about 250 HV is desired. The moisture content of the coating is very low, which makes OK 74.79 suitable when preheating cannot be applied. The risk of grain boundary cracking is very low when welding with OK 74.79.
