

## **OK 61.80**

OK 61.80 is a rutile type low carbon 19Cr-10Ni stabilized stainless steel electrode. Niobium minimizes the chromium carbide precipitation and thereby improves resistance to intergranular corrosion.

| Specifications  |                        |
|-----------------|------------------------|
| Classifications | SFA/AWS A5.4 : E347-16 |
| Approvals       | IBR : E347-16          |

Approvals are based on factory location. Please contact ESAB for more information.

| Welding Current | AC, DC+          |
|-----------------|------------------|
| Ferrite Content | 3-10 FN          |
| Alloy Type      | Austenitic Cr-Ni |
| Coating Type    | Rutile           |

| Typical Tensile Properties |                       |                |                  |            |
|----------------------------|-----------------------|----------------|------------------|------------|
| Condition                  | Conditional Statement | Yield Strength | Tensile Strength | Elongation |
| AWS                        |                       |                |                  |            |
| As Welded                  | As welded             | 500 MPa        | 630 MPa          | 35 %       |

| Typical Charpy V-Notch Properties |                     |              |  |
|-----------------------------------|---------------------|--------------|--|
| Condition                         | Testing Temperature | Impact Value |  |
| ISO                               |                     |              |  |
| As Welded                         | 20 °C               | 60 J         |  |
| As Welded                         | 0 °C                | 58 J         |  |
| As Welded                         | -60 °C              | 40 J         |  |

| Typical Weld Metal Analysis % |      |      |      |       |      |
|-------------------------------|------|------|------|-------|------|
| С                             | Mn   | Si   | Ni   | Cr    | Nb   |
