

Shield-Bright 410NiMo

Shield-Bright 410NiMo is an all-positional gas shielded flux cored wire for fabrication and repair of hydroelectric turbine "runners" and other similar applications. Its spray-like transfer enhances the arc characteristics while minimizing post-weld clean up and rework. The ease of use and "user-friendly" characteristics minimize training while producing consistent quality welds. The self-peeling slag removal and easy post-weld clean up minimize the cost to deposit while improving performance efficiency. This electrode is designed for use with Argon/CO2 shielding gas (75 to 80% Argon, balance CO2).

| Specifications | | | | |
